The State of Apache Geronimo

by Bruce Snyder

What is a three-tier architecture?

- Composed of three layers
  - Client (i.e. Browser)
  - Server (e.g. app server, web server)
  - Enterprise Information System (e.g. database, other applications, etc.)

What is an application server?

- Component based
- Resides in the middle tier
- Provides middleware services (e.g. persistence, security, transactions, etc.)
- Hosts business applications

What application servers are available?

- See the Application Server Matrix
  http://theserverside.com/reviews/matrix.jsp
  - BEA
  - IBM
  - Jboss
  - Jonas
  - Orion/Oracle
  - Resin
  - Sun

What is a Java application server?

- Provides a web container
  - HTTP, JSP/Servlet
- Provides a J2EE container
  - JDBC, JTA, JTS, JMS, EJB, JNDI, JAXP, Web Services, JMX, JCA, JAXR, SAAJ, JAX-RPC, JAF, RMI over IIOP, Java IDL

What is Apache Geronimo and where does it fit in?

- Sponsored by the Apache Software Foundation
  - Not for profit corporation
- Uses Apache Software License
  - Assigns copyright to Apache Software Foundation
  -

What is Apache Geronimo and where does it fit in? (cont'd)

- To provide a full J2EE stack
  - JDBC, JTA, JTS, JMS, EJB, JNDI, JSP/Servlet, JAXP, Web Services, JMX, JCA, JAXR, SAAJ, JAX-RPC, JAF, RMI over IIOP, Java IDL
- Also will provide
    - HTTP

When will Apache Geronimo be released?

- When it's ready ;-)
- Some modules are currently functional
- Other factors
  - Exit from Apache Incubator

Why another Open Source Java app server?

- No existing offering provided via a BSD derived license
- The ASF already sponsors several projects that provide implementations of pieces of the J2EE puzzle
- Best of breed app server reusing Open Source from the community
- No existing offering is J2EE certified (Jonas is working toward this)

Architecture

- TBD

Current Status

- AOP - System Aspects, Caching, Clustering, Components, Configuration, Connector Architecture, Container, Deployment, JNDI, JSR-88, Kernel, Management, Management Client, Persistence, Security, Transactions, User Experience, Validator, Web Container, Web Services

Road Map

- TBD

How do I get involved?

- Subscribe to the mailing list
- Participate in discussions
- Become familiar with the code base
- Contribute
